

World Cup 2022

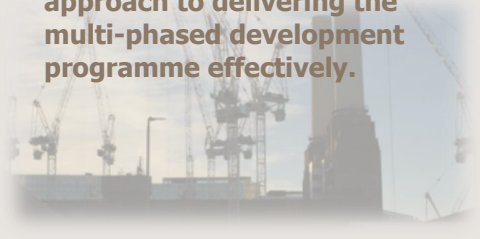

86% of visitors to the 2022 Football World Cup are expected to pass through Hamad International Airport.

o&i was part of the Event Readiness Planning team determining the capacity requirements to enable HIA to handle the forecast volumes. Our role included model development, scenario modelling and identifying potential capacity shortfalls.

Battersea Power Station

Working in conjunction with Jacobs, o&i provided logistics expertise in the creation of a centralised Logistics Strategy for the regeneration of the Battersea Power Station site.

We recommended a strategic approach to delivering the multi-phased development programme effectively.

One Stop Security Study

On behalf of the European Commission, o&i consulting conducted a study regarding the benefits of One Stop Security (OSS) arrangements.

We assessed the status quo of OSS arrangements, identified reasons for non-implementation at State and airport level, evaluated the costs and benefits, and recommended how the initiative could be expanded.

Passenger Flow Study

With a focus on the protection of landside areas, the European Commission engaged o&i to assess passenger flow in the public areas of 15 EU airports.

Our team identified opportunities to reduce congestion and minimise bottlenecks, and developed a best practice toolkit for airports.

A round up of some of o&i consulting's project highlights from 2018.

Goods In Waste Away

As part of Stansted Airport's Transformation Programme, o&i consulting was appointed by Pascall + Watson to provide logistics support in the design of an integrated solution for Goods In Waste Away. We recommended future flows and processes and highlighted potential issues, risks and capacity shortfalls.

Airport Logistics

Continuing to work alongside Jacobs at Manchester Airport, our aviation logistics specialists conducted detailed service yard capacity and demand analyses.

We advised the client on capacity and infrastructure requirements to meet GIWA demand, and processing and management options to accommodate various development phases.

T5 Capacity Increase

o&i consulting is providing ongoing process support to identify and validate opportunities to increase capacity in Terminal 5, Heathrow.

Through process measurement and operational trials we are helping the client to identify where capacity gains can be made without significant infrastructure change.

Construction Logistics

Transport for London set up a Construction Logistics Programme with the aim of reducing the volume and impact of construction road freight in London.

Transport logistics experts from o&i and Jacobs were engaged by TfL to deliver Logistics Improvement Group meetings, reviewing the progress of existing projects and discussing key logistics themes.
